## FERTI-LOME DO-IT-YOURSELF LAWN CARE SYSTEM

**Our do-it-yourself lawn care system gives you the very best products to guarantee you have the very best lawn.**

**Step 1 All Seasons Crabgrass Preventer with Proflaminate (Barricade)** is the longest lasting, most recommended crabgrass preventer used by professional applicators to protect lawns from crabgrass and other annual weeds all season long. This product needs to be watered in and can be applied now.

**Step 2 Weed Out Plus Lawn Fertilizer** is a broadleaf weed killer that has three different very effective weed killers. This product controls all broadleaf weeds including henbit, chickweed and dandelion. Apply in May to a damp yard.

**Step 3 Grub Free Zone II** Again, the best product on the market for controlling grubs. This new generation insecticide will last all season, protecting your lawn from grub damage. Apply in late May to early June.

**Step 4 Winterizer** This fertilizer is made specifically for Kansas lawns. We have sold thousands of bags over the years and it always works. This application is done in early fall to help your yard recover from summer stress.

**Step 5 Winterizer** Fall is the most important time to fertilize and two applications of Winterizer is the best way to do it. This late fall application will make your lawn greener in the winter, more cold hardy and green faster next spring.

**Our 5 step System**

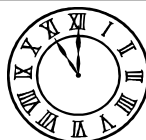

reg. price \$106.95

**now only**

**\$89.99**
